## About Conference:

The COVID-19 outbreak is a global financial and public health crisis. Economic growth has shown a steep drop and is predicted to continue the same considerably in the near future to a great extent on a long term basis. COVID-19 has raised the alarm and given us the warning signal that scientific cooperation is an important key when dealing with global public health issues.

**The Theme- “New Vistas in Aquatic & Terrestrial Biology and Environment during Current Pandemic (ATBE-2021)”** is appropriate in the present scenario as the world’s population is growing fast and natural resources are becoming limited. With a projected increase in global population by 2050, food production must double. Innovation in biological sciences will play an important role in the future success of animal agriculture, aquaculture, biodiversity, food safety and rural economy.

The research in biological sciences is necessary in order to continue providing safe and abundant food supplies for the growing global community with sustainable approach so as to protect our natural resources.

Aquaculture is the fastest-growing food sector worldwide. Aquaculture refers to raising and breeding aquatic animals (fish, shrimp, crab, shellfish, etc.) for economic purpose by the use of ponds, reservoirs, lakes, rivers and other inland waterways which play an important role. With an increasing global population and improving perception of fish food in diet, aquaculture must ensure that production yields are optimized.

The main aim of the present International conference is to bring together leading academic scientists, researchers, academicians and research scholars to exchange and share their experiences and research results on all aspects of biological sciences, aquaculture and environmental issues across the world. It will also provide a premier interdisciplinary platform for researchers, participants and educators to present and discuss the most recent advances/innovations, trends and concerns in the various fields.
